BEYOND Center of Excellence for Earth Observation Research and Satellite Remote Sensing of the National Observatory of Athens

BIO Presenter

Haris Kontoes holds the position of Research Director in the Institute for Astronomy and Astrophysics Space Applications and Remote Sensing of the National Observatory of Athens (NOA/IAASARS) and leads the Center for Earth Observation Research and Satellite Remote Sensing BEYOND (www.beyond-eocenter.eu). Since 1992 he has been assuming responsibilities in managing Earth Observation operational & research projects, focusing on risk assessment and mitigation, **disaster risk reduction, environmental resource management and sustainable development, agriculture and food security, energy and big data analytics for cross sector needs**. He leads a multidisciplinary team of researchers with active participation in Space related projects supported by ESA, EC, **COPERNICUS, GEO, EUROGEO** and International Funding Institutions (WB, EIB, etc). He has been coordinating the operation of Copernicus Data Hubs, as well as the operation of the Hellenic Sentinel Data Mirror Site - (<http://sentinels.space.noa.gr>). He coordinates the **GEO-CRADLE** initiative for the uptake of Earth Observation and Copernicus in the regions of Mediterranean, **North Africa, Middle East, Balkans, and Black Sea**. He is author of more than 200 publications in reviewed journals and scientific conferences. He is member of the editorial board of IJPRS, IJRS, SENSORS, IEEE Geoscience and RS and he is member of the Advisory Boards of EU and ESA programs and initiatives. He speaks English, French and Italian.

Beyond Centre of EO Research & Satellite Remote Sensing

❑ The BEYOND Center of Excellence develops research and addresses societal and sector priorities in South Eastern Europe, Mediterranean, N. Africa, Middle East and the Balkans.

❑ The activity of the Center is supported by a multidisciplinary team of experts; annual turnover of 4MEuros from fully competitive R&I contracts

❑ Axes of activity:

❑ Observing from Space

❑ Security of Space

❑ Big Data Analytics

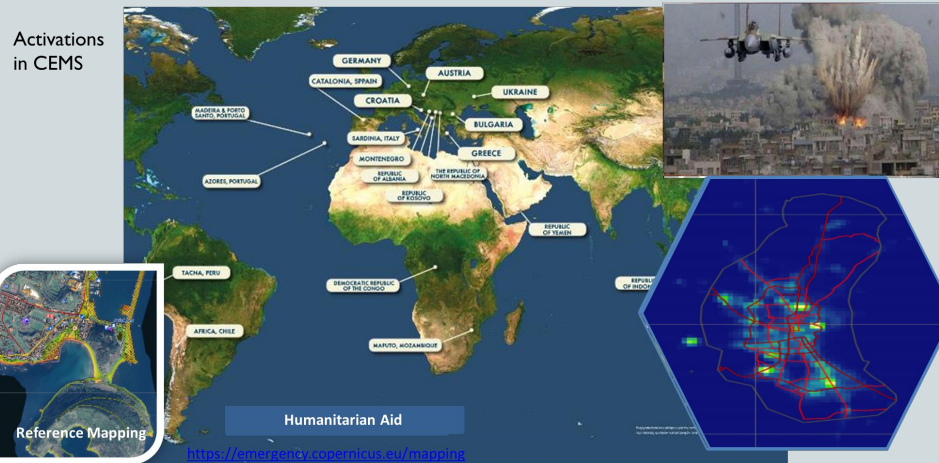

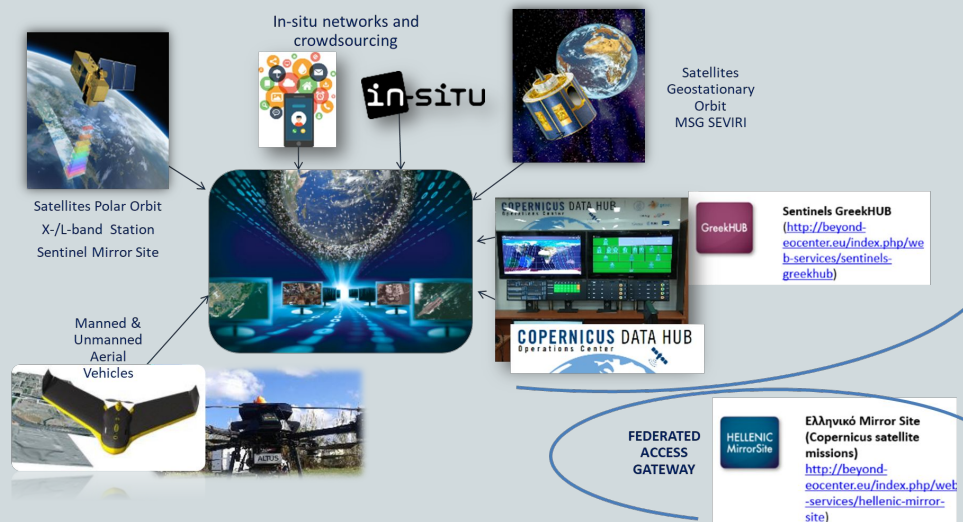

❑ Data Science and ML/DL/AI

❑ Modelling (simulation, assimilation) of Physical phenomena and processes

❑ Transform Data to Knowledge and support decision making processes in Disaster Risk Reduction, Food Security, Sustainable Environment, Climate Change Adaptation, Energy, Humanitarian Crisis, and Health Crisis

❑

❑ The BEYOND Center has installed and operates large scale infrastructures for the systematic reception, management and redistribution of data acquired by satellites and in-situ monitoring networks. The coverage and usage of the monitoring infrastructure is

Early Detection and Warning on Earth status

Monitoring of the Environment and Climate

Creation of Operational Pictures and Dynamic Changes of Landscape, Ecology, Wildlife Hosting Ecosystems and Meteorological Factors

Gather and Assimilate in Real Time, as well as Weekly, and Seasonal basis Big Data from Entire Planet

Support Disciplines linked with One Health and Eco Health as Climate Change, Ecosystem Service Modeling, Prediction, Prevention and Decision Support in Human, Animal, and Environment Risks

"Disasters cost hundreds of billions of dollars, hitting the poorest countries disproportionately and pushing millions into poverty. We must tackle disaster risks and leave a more resilient planet to future generations."

António Guterres,
United Nations Secretary-General

#IDDR2018
#ResilienceForAll

▶ Last year 18 million people were forcibly displaced by extreme weather events linked to climate change.

#IDDR2018
#ResilienceForAll

- 1 over 9 people will be forced to abandon their homes due to climate change and natural disasters
- 1 billion of people will leave Africa in the next 25 years due to draught and desertification

▶ Disasters drive 26 million people into poverty every year.

World hunger in

(Source : United Nations) numbers

- 11.3% of the world's population suffers from hunger
- 805 millions of people consume less than 2100 calories per day
- 25,000 die from hunger every day
- 9.1 millions of people die worldwide each year because of hunger
- 4 children die from hunger every minute

Poverty is the main cause of hunger
Poor land-use, over-exploitation of resources,
and **lack of knowledge** in supporting the
agricultural policy are factors that opposed to
food security, rural economy and environmental/
ecological protection

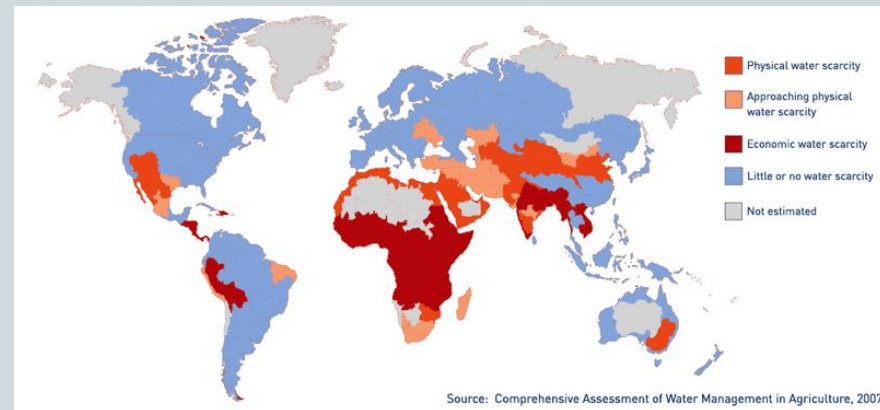

Water

scarcity

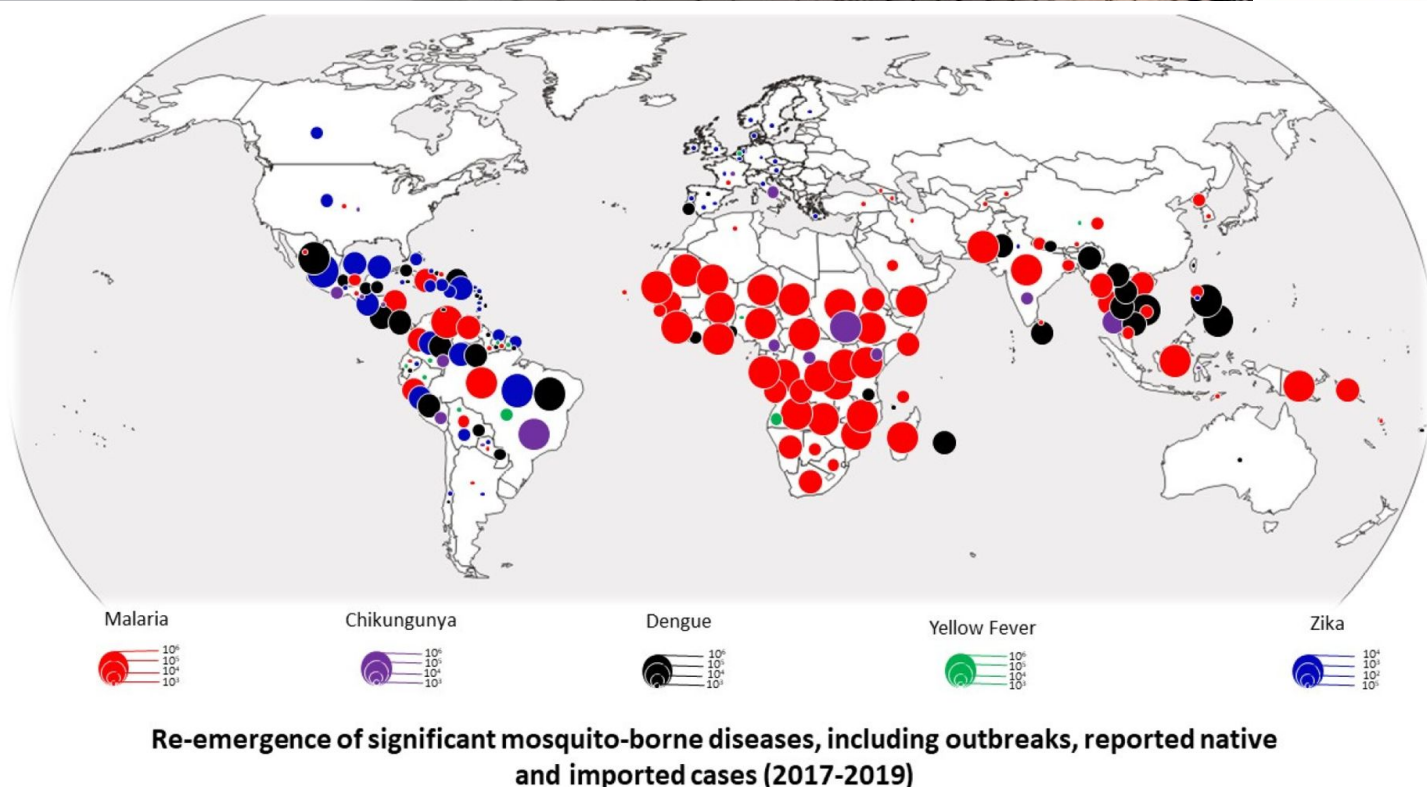

(Source: United Nations)

- **2.8 billion people around the world** suffer from water scarcity for at least one month every year
- **1.2 billion people** lack access to clean drinking water
- **2.4 billion people** are exposed to diseases such as **cholera, typhoid fever** and others due to water scarcity
- **The absence of clean water and drainage systems contribute to infectious diseases**, with a huge impact on deaths worldwide
- **The irrational use, and the inability to know the water balance**, combined with **climate change** are the main water scarcity factors

(Source: WHO)

- Y 2020, **241 million cases of malaria** worldwide.
- Y 2020, **Malaria deaths stood at 627000**
- **Dengue cases** increased over 8 fold over the last two decades, from 505430 in 2000, to over 2.4 million in 2010, and **5.2 million in 2019.**

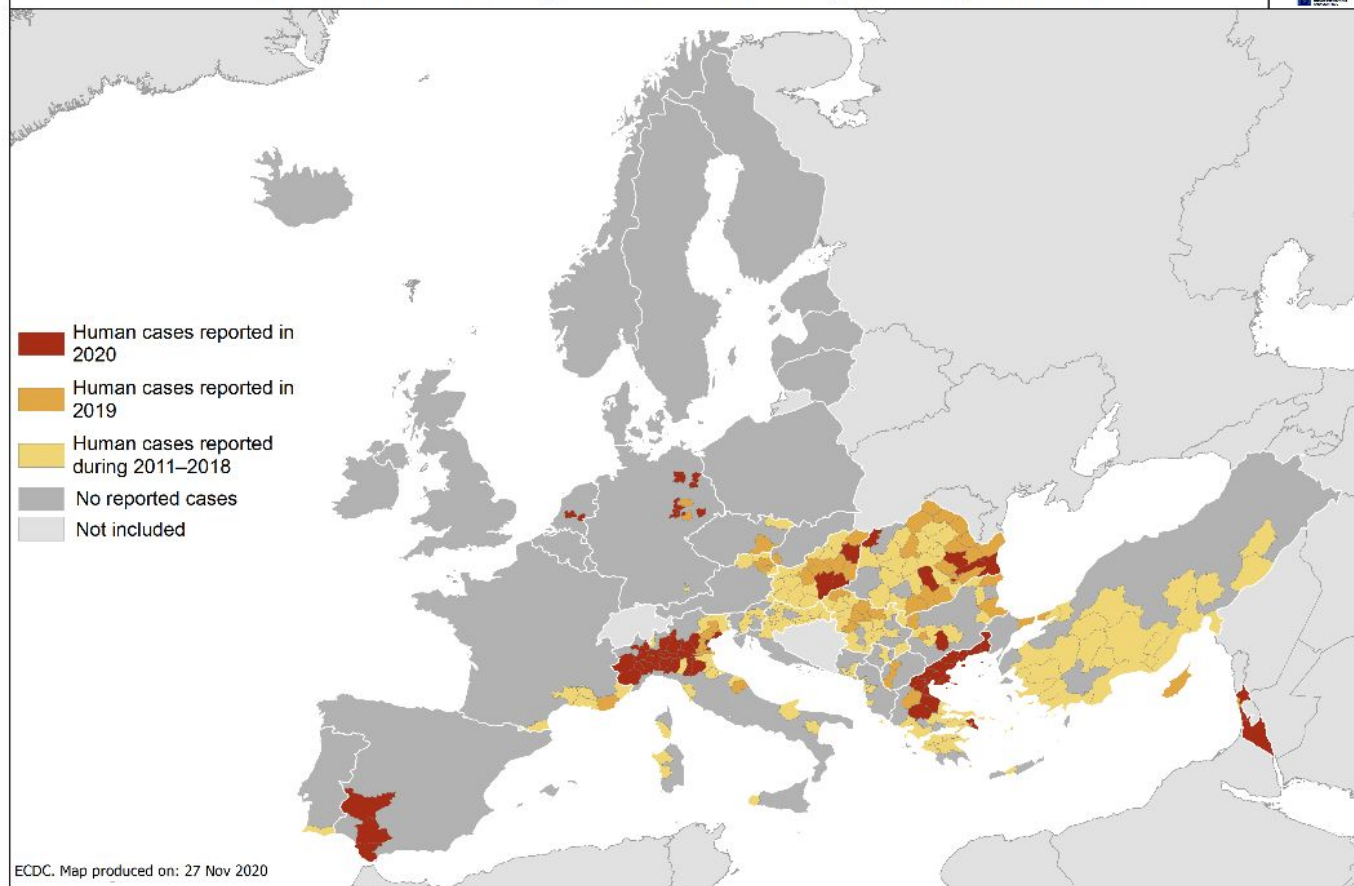

**(ECDC, EU/EEA
Reported cases
2008-2020)**

- **West Nile
Virus:4226**
- **Malaria:85246**
- **Dengue, Zika and
Chikungunya:
30249.**

Distribution of West Nile virus infections in humans by affected areas in the EU/EEA countries and EU neighbouring countries
Transmission season 2020 and previous transmission seasons; latest data update 26 Nov 2020

EMPROS aims to Advance the Research, Excellence and Innovation Topics of the EYWA Early Warning Operational System
A game changer in the domain of epidemics

- Already operational in **9 regions in 5 European countries** at a **TRL 9**, currently expanding to non-European (Côte d'Ivoire, Thailand) TRL from 7 → 9.

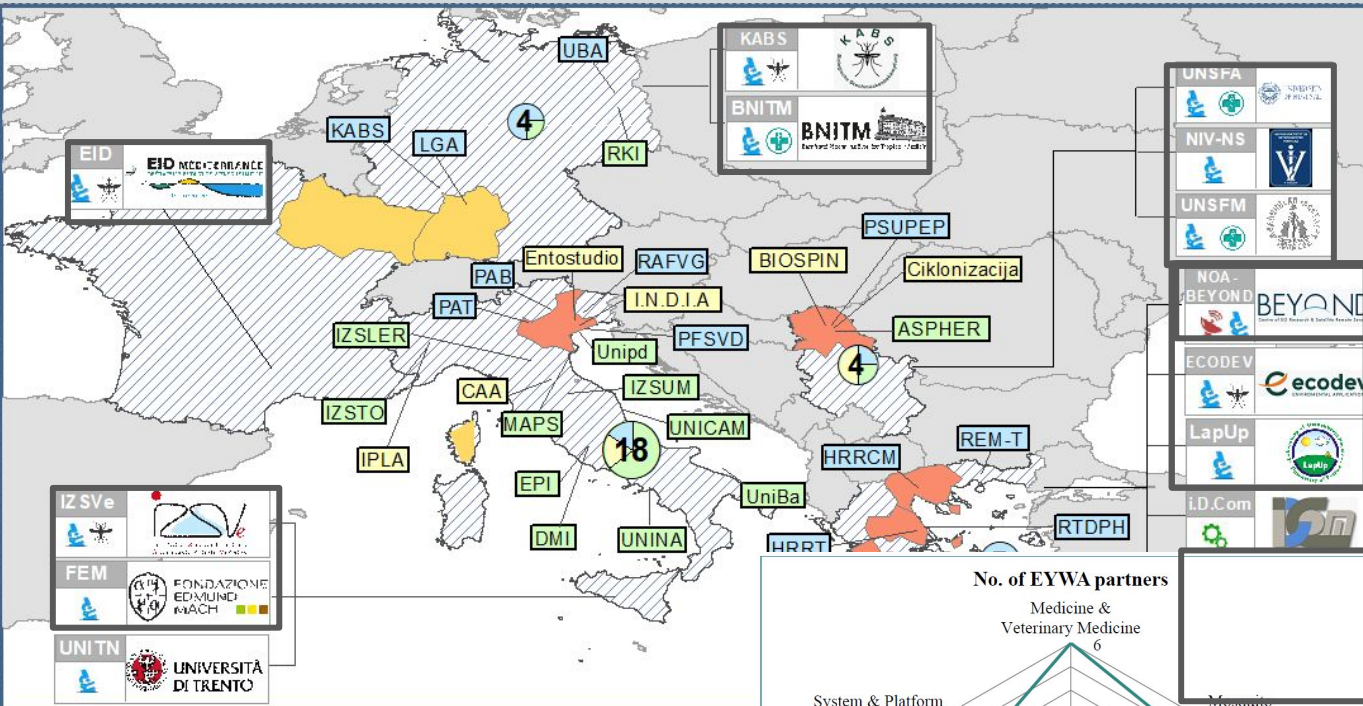

In a nutshell:

- **EYWA** won **EIC Horizon Prize** on **Early Warning for Epidemics**.

- **EMPROS** is a greek research program that develops and provides support to **EYWA**.
- **Early Warning System for Mosquito borne diseases EYWA**, developed in the context of EuroGEO. A **niche state-of-the-art tool** that distills EO data, advanced epidemiological and entomological modeling, and ML big data analytics.
- Provides advanced **predictive modeling** results for both **mosquito populations** and **MBD risk**.
- **EYWA** transforms scientific knowledge into **decision-making** and supports the **EU** to address a **Pandemic State of Emergency** at both **European and non-European scale**.
- **EYWA** was recently onboarded as a pilot to the e-shape **H2020** project.

How EYWA competes

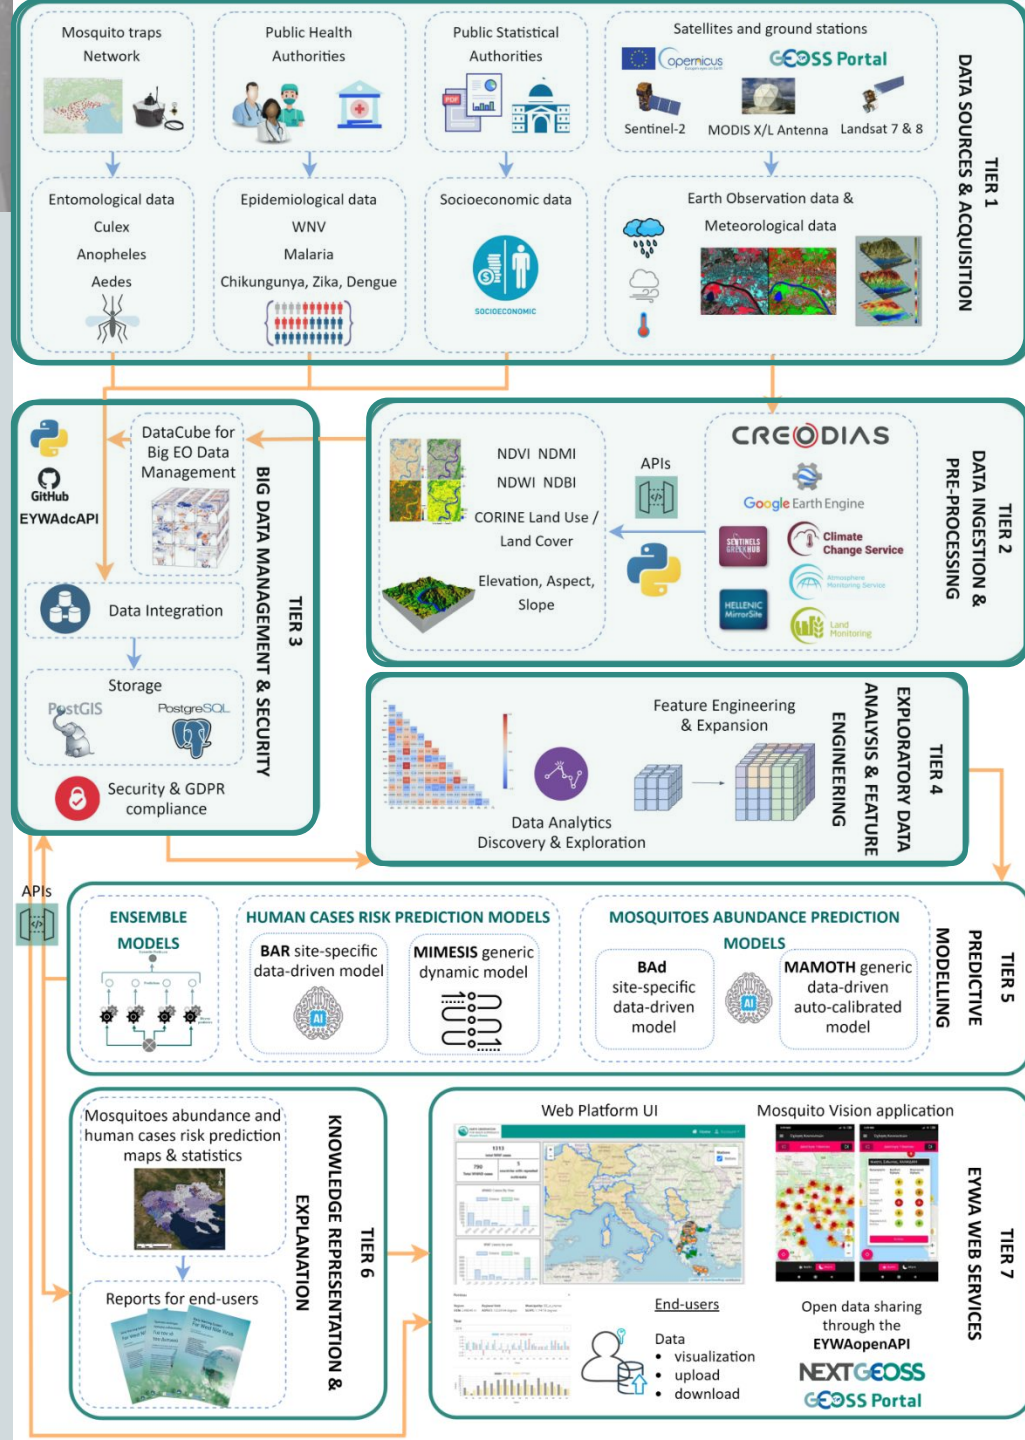

Reached the **Technology Readiness Level 9** in
Greece, Italy, Serbia, Germany and France

“EYWA is a robust and scalable Early Warning & Decision Support System that welcomes new partners from around the world to share data and transform scientific knowledge into decision-making & mosquito control actions”

EYWA System Architecture

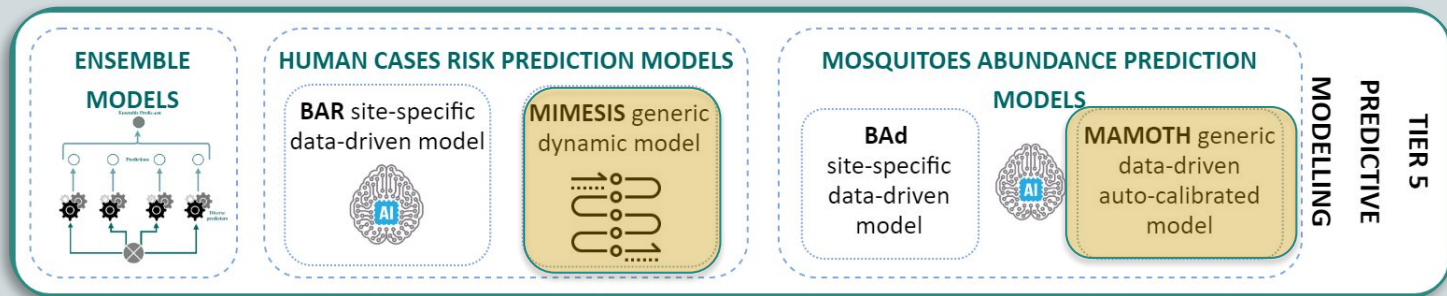

- Time-series of entomological, epidemiological, socio-economic, satellite Earth Observation, meteorological and geomorphological data
- A suite of APIs is developed and opened for automatic data harvesting, pre-processing and indices derivation.
- Big Data management (~300 TB and counting) > 2 εκατομμύρια εγγραφές ανεξάρτητων μεταβλητών
- Open Data Cube (ODC) technology
- 36 features for each of the 39.000 mosquito collections in our database.
- A “MAMOTH” feature space of at least 10-years time-series of data for every mosquito-traps network in ten regions in Europe.

Data Opened
through NextGEOSS

EYWA state-of-the-art Models

EYWA has a factory of dynamic and data-driven models, learning about the dynamics of mosquitoes' abundance and mosquito-borne diseases transmission, and providing monthly, weekly, daily predictions.

MAMOTH(NOAA)

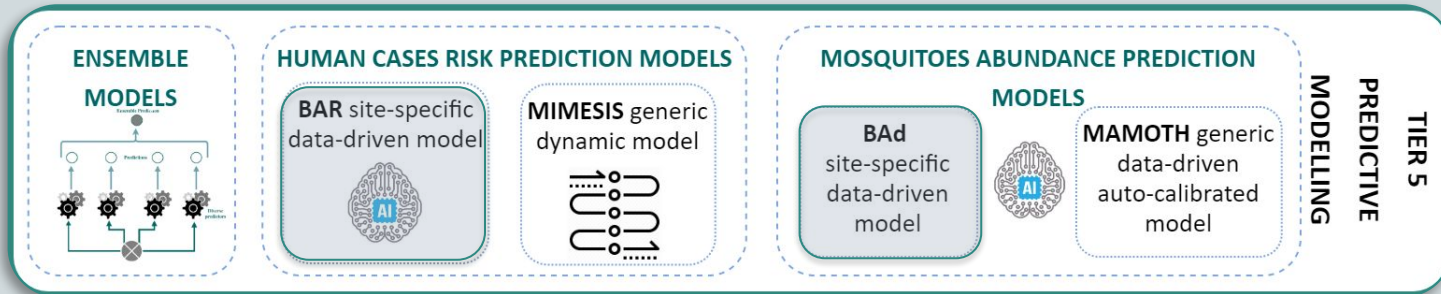

- Data-driven ML (Gradient Boosting) model**
- Auto-calibrated, generic, applicable/transferable** to all landscapes
- Trap and off-trap level**

MIMESIS(Uni of Patras)

- Climate-dependent epidemiological model(deterministic)** operating in an ensemble (probabilistic) framework.
- Spatial-temporal scale:** municipality, monthly, seasonal
- Climate forcing: ECMWF seasonal forecasts issued every month**, hence MIMESIS forecasts are updated on a monthly basis.
- Model Outputs include **infected mosquitoes, mosquito abundance, infected humans, risk, week of infection.**

EYWA state-of-the-art Models

EYWA has a factory of dynamic and data-driven models, learning about the dynamics of mosquitoes' abundance and mosquito-borne diseases transmission, and providing monthly, weekly, daily predictions.

BAd(ECODEV)

- Data-driven ML (Neural Network) model
- High resolution, Site-specific**
- Settlement level**

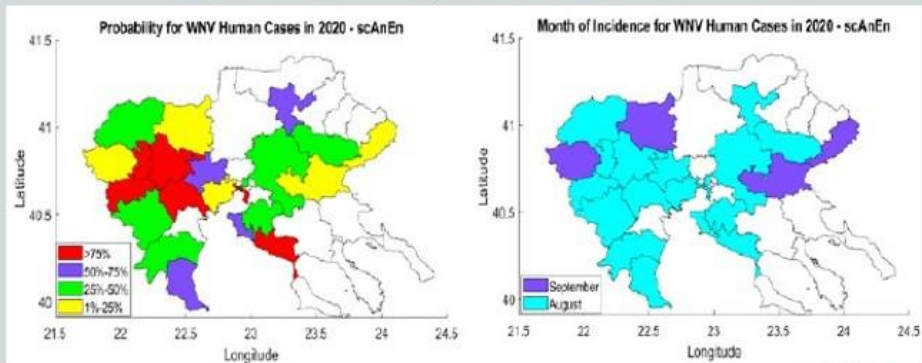

BAR(ECODEV)

- Data-driven (Neural Network) model
- High resolution, Site-specific**
- Settlement level**

incidence calculated
over the 1040
municipalities in Central
Macedonia for the week
31/08-06/09/2020

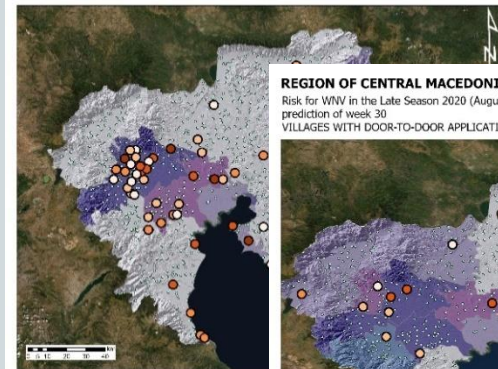

REGION OF CENTRAL MACEDONIA

Risk for WNV in the Early Season 2020 (May-June - July) according to MIMESIS prediction of week 22

VILLAGES WITH DOOR-TO-DOOR APPLICATIONS AND NO. OF INSPECTED HOUSEHOLDS

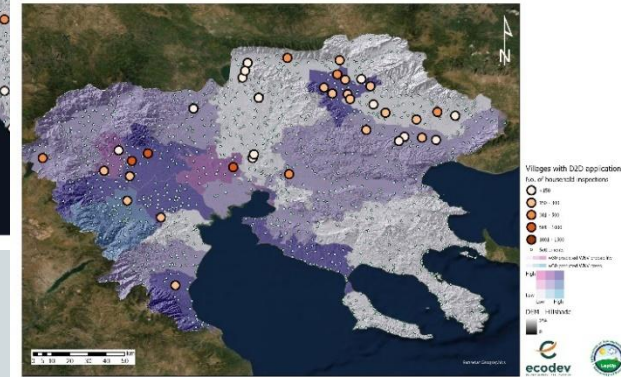

REGION OF CENTRAL MACEDONIA

Risk for WNV in the Late Season 2020 (August - September - October) according to MIMESIS prediction of week 30

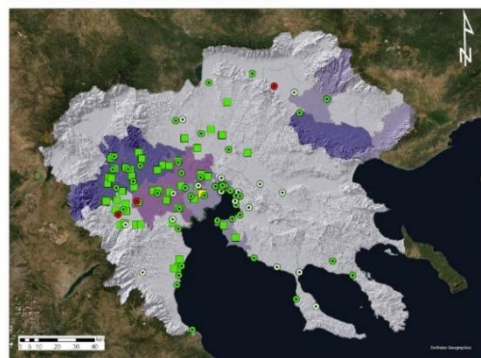

VILLAGES WITH DOOR-TO-DOOR APPLICATIONS AND NO. OF INSPECTED HOUSEHOLDS

Decision making process of the mosquito control

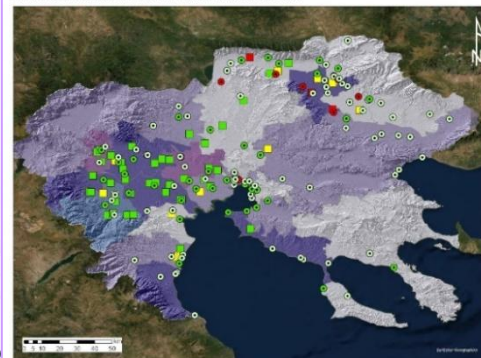

REGION OF CENTRAL MACEDONIA

Risk for WNV in the Early Season 2020 (May - June - July) according to MIMESIS prediction of week 22
DEPLOYMENT AND RESULTS OF MONITORING NETWORKS

REGION OF CENTRAL MACEDONIA

Risk for WNV in the Late Season 2020 (August - September - October) according to MIMESIS prediction of week 30
INTENSIFICATION AND RESULTS OF MONITORING NETWORKS

Door-to-door applications during late season were intensified up to 5-8 times more in villages at risk compared to villages without risk

The average spraying applications, and the average sprayed surfaces per at-risk village, were ranging from 2 up to 6 times more in risk compared to no risk areas, guided by the prediction for week 32, was 8,5 times higher in at-risk than in no-risk villages

Intensification of sampling activities in at-risk areas vs no-risk areas

2020-2021 Response actions

- **Wetlands**
- **Rural areas**
- **Periurban**

Aerial larviciding

Ground larviciding
(*8,5 sprayed surfaces 2020)

Drones

- **Built environment**

Cities - catch basins
(+ 2-5 extra rounds 2020)

Villages – cesspools
(+ 60 villages extra 2020)

ULV

EYWA Success Metrics

2 years of successful operation

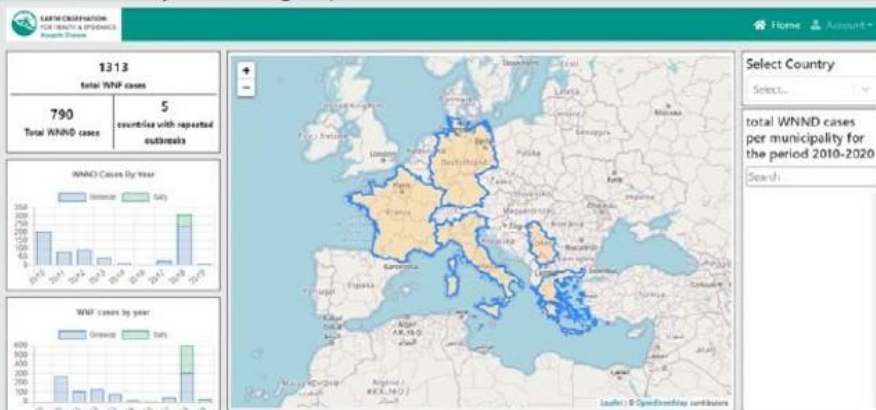

The EYWA system has displayed

- ❑ Can predict mosquito abundance populations with more than 90% accuracy
- ❑ Can highlight the settlements and municipalities with high WNV risk. Through real world operational validation about half WNV cases have been registered in the settlements and municipalities that have been predicted by the system, thus allowing taking targeted measures to combat mosquitoes and larvae in those high risk areas. (e.g. in the Central Macedonia region in 2020 33 out of 65 settlements where WNV cases were eventually registered have been highlighted out of a total 1050 available settlements in the whole region).
- ❑ Based on the above data we can say that the mosquito populations have been significantly reduced (up to 50%) compared to the historical averages, thus reducing the risk of WNV.

EYWA Web GIS Platform – Indicative Functionalities

Authenticated end users are able to upload data and get the results (entomological/epidemiological)

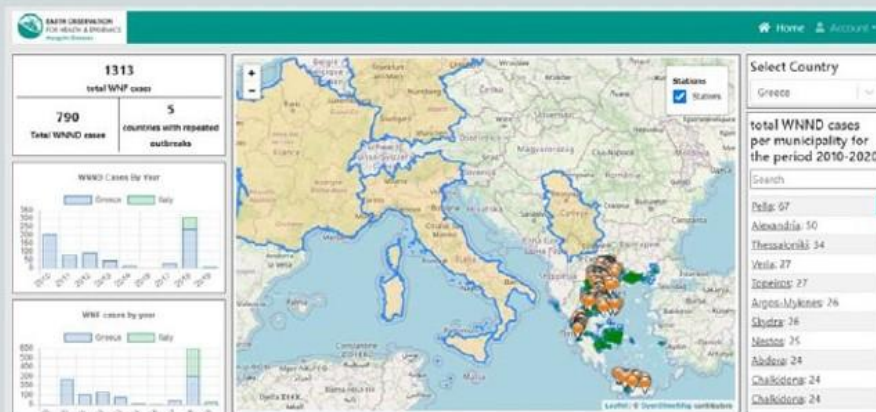

Visualise the areas of application and the number of MBDs historical human cases published by ECDC and National Health Organisations

Select any country and visualise the mosquito traps networks

Visualise and report on the human cases risk forecasts produced from the various predictive models (dynamic – data driven)

For any selected trap visualise time-series, statistics, and data analysis and trends of calculated and recorded meteo, societal, and environmental parameters (NDVI, NDMI, NDWI, temperature, rainfall, population)
